Instead of Google, people now ask AI.

ChatGPT Claude Gemini

But small family guesthouses are left behind.

Ask AI to book a hotel and it gives you the massive ones.

Consumer behavior is changing.

the shift

The Problem

Six months ago we built software for hotels and talked directly with owners. Most of them had the same problems.

1

15–25% commission

goes to booking platforms on every booking.

2

27% of bookings cancel

and the hotel absorbs the loss.

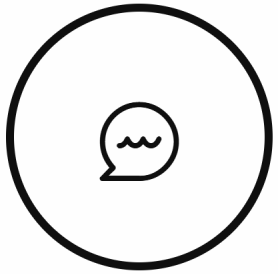

3

The same rigid rules

for every guest, no matter who they are.

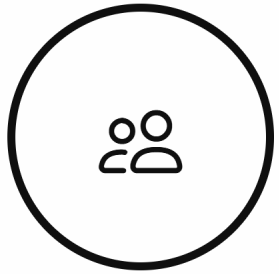

Our Solution

Every hotel gets its own AI agent that creates a personal contract for each guest.

Your own AI agent

AI assistants can find and book your hotel through it.

The best option for every guest

Terms that fit what each guest needs.

Hotels protected when guests cancel

The refund is already in the contract. No middleman.

stumari

Why stablecoins?

AI pays by itself

Stablecoins are money an AI agent can send on its own.

Instant

The payment clears in seconds.

Faster cash flow, no time wasted

Hotels are paid 24 hours after check-in, and the AI books for you in one message.

Who We Are

Computer science students, working full time on **Stumari**.

Luka

Blockchain developer. Maths and computer science, Free University of Tbilisi

Giorgi

ML and full-stack engineer, Kutaisi International University

Traction

Every hotel owner we met signed a letter of intent.

5

hotel owners met

5

letters of intent signed

hotels onboarding onto our pilot

stumari

“Next time you ask AI where to stay, the answer should be a hotel based on your requirements, booked in one message.”
